2. **Target Multiplier:** The goal the player sets (e.g., 2.00 x, 10.00 x, and even 1,000,000 x).
3. **Win Chance:** The statistical probability of hitting the target multiplier, normally expressed as a percentage.

Due to the fact that of the house edge (normally around 1%), the mathematical win chance is a little lower than the pure inverse of the multiplier. For example, a 2.00 x multiplier does not provide a 50% chance of winning, but rather a 49.5% opportunity (presuming a 1% house edge).
