A metronome produces a steady pulse ***free metronome metronomeworld.com*** at a chosen speed, measured in beats per minute.

How a pendulum metronome works

A spring-driven escapement keeps the pendulum moving. Sliding the weight up slows it; sliding it down speeds it up.

Electronic timing

Electronic metronomes rely on accurate clocks.

Metronomes in your browser

Online metronomes schedule each click on the computer's audio clock, so they stay steady even when the computer is busy.

Uses

Musicians use it **metronome** to keep steady time, learn pieces and build speed, and teachers rely on it.
