Fraudsters typically run in one of two ways:

1. **Low-Quality Novelty Items:** They print plastic cards that resemble an EU license visually, which will instantly fail even a cursory inspection by traffic cops or automated scanners.
2. **Advanced Counterfeits:** They reproduce physical security features with high precision, however **the data does not exist in the main state database**. When scanned during a regular traffic stop, the absence of a corresponding digital record immediately exposes the document as a forgery.
