- **Rock** squashes Scissors.
- **Scissors** cuts Paper.
- **Paper** covers Rock.

In a gambling context, gamers stake genuine currency-- frequently fiat or cryptocurrency-- versus a home dealership, an automatic algorithm, or another player in a peer-to-peer (P2P) match.

### Requirement Game Modes

1. **Player vs. House (PvH):** The gamer wagers versus an online casino platform. The casino makes use of a Random Number Generator (RNG) or provably fair system to choose its throw concurrently with the player.
2. **Gamer vs. Player (PvP):** Two human challengers position equal bets into a pot. Both send their options covertly (frequently by means of a smart agreement on a blockchain), and the system exposes them all at once. The winner takes the pot, minus a small platform fee (rake).
3. **Best of Series:** To minimize your home edge or variation, video games are often played as a "Best of 3," "Best of 5," or "Best of 7."

Result Probability (Single Round) Standard Payout (Even Money) **Win** 33.33% 1:1 (Double your cash) **Loss** 33.33% Lose stake **Connect** 33.33% Push (Stake returned or replayed)

### Understanding the House Edge

In Player vs. House video games, how does the casino generate income if the odds are equally divided? Casinos carry out a home edge mainly through **tie rules** or a **commission cost**.

- **The Tie Rule:** In some variations, if a round results in a tie, the home wins the bet, or the payout for a win is somewhat reduced (e.g., paying 0.95 to 1).
- **The P2P Rake:** In peer-to-peer gambling platforms, your home takes a small portion (normally 1% to 5%) of the overall pot for hosting the match.

## Psychology and Strategy: How to Gain an Edge

Since human beings are infamously bad at being truly random, gamers who understand behavioral psychology can dramatically enhance their win rates versus human opponents (and sometimes improperly programmed bots).

### Typical Human Biases in Rock Paper Scissors

- **The Win-Stay, Lose-Shift Pattern:** When players win a round, they tend to toss the same winning indication once again. When they lose, they tend to switch to the sign that *would have* beaten what simply defeated them.
- **The Rock Bias:** Novice players throw Rock regularly than Paper or Scissors in the opening round due to the fact that it feels psychologically "more powerful" and more aggressive.
- **The Gambler's Fallacy:** If a gamer tosses Paper three times in a row, opponents heavily presume they will change to Rock or Scissors on the fourth throw.

### Proven Winning Strategies

- **The Conditional Response Strategy:** Anticipate your opponent's response to the previous round. If you won the last round with Rock, anticipate your challenger to switch to the item that beats Rock (Paper). Therefore, you need to throw Scissors.
- **Game Theory Optimal (GTO):** Play with absolute randomness. Utilize a digital randomizer or entirely separate your mind from pattern-making so that your challenger can not exploit your routines. This ensures you will not lose over a long sample size, though it caps your winning possible to luck.
- **Exploitative Play:** If you see a challenger greatly favors Paper, stop randomizing and specifically throw Scissors up until they adjust.
