How the Game Works: Core Mechanics

To genuinely master the skies, a player should initially understand the foundational mechanics of the game. While precise features can vary slightly depending upon the specific platform hosting the game, the universal framework stays consistent.

The Flight Phase

As soon as a round starts, the aircraft takes off the runway and starts its climb. As it climbs, a multiplier counter starts ticking upward-- beginning at 1.00 x and continuing to increase. The longer the flight continues without occurrence, the greater the multiplier goes.

The Descent and Hazards

The skies are seldom clear. Along the flight course, numerous aspects appear that can either increase the player's score or too soon end the run. These can include beneficial tailwinds, fuel boosts, storm clouds, or sudden altitude drops.

Squandering

The defining mechanic of Avia Masters is the element of danger versus benefit. Players need to choose the optimal moment to "cash out" or secure their development. Wait too long, and a sudden danger may crash the plane, resulting in a lost round. Cash out too early, and gamers may lose out on enormous multipliers.

Game Phase Description Player Action **Pre-Flight** Setting stakes or preparing the aircraft for launch. Place preliminary parameters or begin the round. **Climb** The plane removes; multipliers start to climb up. Screen the flight path and view the multiplier grow. **Mid-Flight** Navigating risks, gathering bonus offers, and examining danger. Choose whether to hang on or protect the existing score. **Resolution** The flight ends either through a successful cash-out or a crash. Gather benefits and prepare for the next round.
