Unlike traditional video games where players spin reels or await cards to be dealt, Limbo is specified by its simplicity. A gamer sets a target multiplier (e.g., 2x, 10x, and even 1,000,000 x) and positions a bet. The game then creates a random multiplier outcome. If the generated outcome is equal to or higher than the gamer's target multiplier, the bet wins. If it falls below, the bet is lost.

Key Characteristics of Limbo

- **Low Risk/ Low Multiplier:** If you set your target to **1.1 x**, your win chance is approximately **90%**. A win yields a little, stable revenue.
- **Medium Risk/ Medium Multiplier:** If you set your target to **10x**, your win chance drops to around **9.9%**.
