- **The Reaction to Wins:** When gamers win a round, they frequently have a cognitive predisposition that tells them to throw the winning shape once again, or they shift to the shape that the opponent might expect them to avoid.
- **The Illusion of Control:** Players frequently attempt to overcomplicate their decision-making, leading to predictable sequences or loops.

- **Making use of the Novice:** If betting an amateur or casual bettor, look for the Rock predisposition. Open with Paper, as it defeats Rock and gives you an immediate analytical advantage.
- **Pattern Recognition (Shot-Tracking):** In longer gambling sessions, keep mental or physical notes of your challenger's sequences. Do they prefer Paper after a tie? Do they stubbornly toss Scissors 3 times in a row? Take advantage of these habits.
