What is Mystery Mines?

Mystery Mines is a digital adaptation of the classic "Minesweeper" idea, reimagined for the modern video gaming age. Unlike the historic video game where the objective was to clear a grid without hitting a mine, Mystery Mines permits gamers to set their own risk specifications. Players place a stake and navigate a grid filled with hidden tiles. Behind these tiles lie either multipliers (gems, coins, or gold) or mines.

The objective is basic: expose as numerous multipliers as possible without clicking a mine. Each successful click increases the player's potential payment, while striking a mine results in the loss of the current stake. The core appeal of the game depends on the "money out" mechanic, which enables [mines game](#) gamers to protect their earnings anytime before continuing to the next tile.

How the Game Mechanics Work

The game counts on a Provably Fair algorithm, ensuring that the positioning of mines is randomized and proven. When a round starts, the server generates a grid-- typically 5x5-- and disperses a predetermined number of mines across it. The gamer then connects with the grid in the following sequence:

1. **Setting the Parameters:** Before the first click, the gamer chooses their bet amount and the number of mines they wish to include in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The gamer clicks a tile. If it is a multiplier, the balance increases, and the player can choose to "Cash Out" or continue.
3. **The Risk:** If a mine is triggered, the round ends immediately, and the stake is surrendered.
4. **The Multiplier Growth:** The more mines chosen at the start, the greater the multiplier for each effective tile opened.

Understanding Risk vs. Reward

The table listed below shows how various mine counts affect the potential growth of a player's preliminary stake.

Number of Mines	Multiplier (Tile 1)	Multiplier (Tile 5)	Multiplier (Tile 10)
1 Mine	1.04	1.22	1.55
3 Mines	1.13	1.85	3.65
5 Mines	1.23	2.80	9.80
10 Mines	1.53	8.80	115.00
