3. **The Climb:** As the item ascends, the multiplier ticks up in real-time. It can stop at 1.01 x, or it can soar previous 100x, 500x, and even greater.

- **The Risk:** A single early crash (e.g., at 1.02 x) can erase the profits of several successful rounds if the bet size isn't handled thoroughly.

2. The Martingale System (Aggressive Recovery)

- **How it works:** Doubling the bet size after every loss, with the goal of recovering all previous losses and protecting a profit equal to the original stake upon a win.
- **The Goal:** To ride out a losing streak until a successful round hits.
- **The Risk:** Requires a massive bankroll and can rapidly trigger table limits or financial ruin during a prolonged streak of early crashes.

3. The Dual-Bet Strategy (Balanced)

- **How it works:** Placing two different bets on the exact same round. Bet A is set to auto-cashout early (e.g., 2x) to cover the cost of both bets, while Bet B is delegated ride for a high multiplier.
- **The Goal:** To protect a baseline win while retaining a lottery game ticket-style opportunity at a massive payout.
- **The Risk:** Doubles the monetary exposure per round.
