Here are the classifications of skins that control the high-end trading scene:

1. Keepsake AWP|Dragon Lore (Cobblestone)

Arguably the most popular skin in Counter-Strike history, the Dragon Lore from the Cobblestone collection remains a titan. Souvenir versions dropped during major champions and function gold sticker labels from the particular match in which they were dropped. A Factory New Souvenir Dragon Lore is extensively thought about the crown jewel of any collection, commanding rates well into the six-figure range.

What Drives Skin Rarity?

Rarity isn't almost the color of the text in a gamer's stock. 3 primary mechanics dictate how uncommon-- and valuable-- a particular weapon finish genuinely is.

- **Float Values (Wear Rating):** CS2 skins range from *Factory New* (0.00 to 0.07) to *Battle-Scarred* (0.45 to 1.00). Some skins are "float topped," implying they can not drop in Factory New condition, making the lowest possible float for that skin extremely rare.
- **Pattern Templates:** As seen with the Case Hardened or Fade finishes, the seed number determines how the texture is mapped onto the 3D model. Particular rare patterns produce aesthetically pleasing or in proportion designs.
- **Trade-Up Contract Outcomes:** High-tier skins are frequently restricted by what active ingredients can be fed into a Trade-Up Contract. Obtaining particular hidden skins via trade-ups requires running the risk of numerous expensive classified products.
