What is Mystery Mines?

Mystery Mines is a digital adjustment of the timeless "Minesweeper" concept, reimagined for the contemporary gaming age. Unlike the historical computer game where the objective was to clear a grid without striking a mine, Mystery Mines enables gamers to set their own threat criteria. Players position a stake and navigate a grid filled with hidden tiles. Behind these tiles lie either multipliers (gems, coins, or gold) or mines.

The goal is easy: expose bitz.io as lots of multipliers as possible without clicking a mine. Each successful click increases the player's prospective payout, while striking a mine outcomes in the loss of the present stake. The core appeal of the game depends on the "squander" mechanic, which permits players to secure their jackpots at any minute before continuing to the next tile.

How the Game Mechanics Work

The game relies on a Provably Fair algorithm, ensuring that the placement of mines is randomized and proven. When a round begins, the server produces a grid-- typically 5x5-- and distributes a predetermined variety of mines throughout it. The player then connects with the grid in the list below sequence:

1. **Setting the Parameters:** Before the first click, the player chooses their bet quantity and the number of mines they want to consist of in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The player clicks a tile. If it is a multiplier, the balance increases, and the gamer can pick to "Cash Out" or continue.
3. **The Risk:** If a mine is set off, the round ends instantly, and the stake is forfeited.
4. **The Multiplier Growth:** The more mines picked at the start, the greater the multiplier for each effective tile opened.

Understanding Risk vs. Reward

The table listed below highlights how various mine counts affect the prospective development of a player's initial stake.

Variety of Mines	Multiplier (Tile 1)	Multiplier (Tile 5)	Multiplier (Tile 10)
1 Mine	1.04 x	1.22 x	1.55 x
3 Mines	1.13 x	1.85 x	3.65 x
5 Mines	1.23 x	2.80 x	9.80 x
