At its core, a live casino is an online video gaming platform that streams real-time table games from expert studios or actual land-based casino floorings. Rather of betting a computer system algorithm, players engage with human dealers who handle physical cards, roulette wheels, and dice tables.

High-definition (HD) video cameras record every angle of the action, while optical character recognition (OCR) technology equates physical actions-- such as a dealer drawing a card or the ball landing on a specific roulette number-- into digital information that appears quickly on the player's screen. Players can position bets through a virtual user interface and even chat with the dealership and other individuals through a live messaging function.
