A case battle is a head-to-head or multi-player contest where each participant opens the same set of CS: GO cases. The player who obtains the most important item (or the highest overall worth) wins the pot. Because the outcome is driven by the random number generator (RNG) that governs every case opening, the underlying mathematics are identical to opening cases in a solo context. The only difference is the competitive component: you're not simply fighting the system, you're battling other gamers who might have different strategies.

The core metric to remember is **Expected Value (EV)** EV is calculated as:

$$EV = \sum (\text{Probability of each product} \times \text{Item's market value})$$

If the EV of a case is lower than its price, the case is, usually, a losing proposal. Knowing which cases tend to provide a higher EV assists a gamer select the most rewarding battles.
