Comprehending the CS2 Rarity Hierarchy

To value rare skins, one should first understand how Valve classifies weapon surfaces. The base video game uses a standard drop and case-opening system, where products are designated into particular rarity tiers, usually signified by color.

Furthermore, items possess a **Wear Rating** (Float Value) varying from 0.00 to 1.00, which determines how scratched or used a skin appears. Particular rare skins are extremely limited in "Factory New" condition, driving their value sky-high.

Standard Skin Rarity Tiers

Rarity Tier Color Code Description
Consumer Grade White Typical "drop" weapons, typically default skins.
Industrial Grade Light Blue Slightly better than consumer grade, common in memento packages.
Mil-Spec Dark Blue The standard baseline for most weapon cases.
Limited Purple Uncommon skins with obvious style patterns.
Classified Pink Extremely detailed and sought-after weapon finishes.
Covert Red The highest basic tier for weapon surfaces, leaving out knives and gloves.
Unique/ Extra-Ordinary Gold Knives and Special Agent gloves.

Beyond these standard tiers, true rarity is typically determined by **Pattern Templates** (which change how a texture is used) and **StatTrak™** technology, which tracks eliminates made with the weapon.

Factors That Drive CS2 Skin Value

What transforms a digital texture into a property worth more than a real-world luxury cars and truck? Collectors look at several unique criteria:
