At its core, Limbo is a simplified, crypto-native betting game greatly influenced by the timeless "Crash" mechanic. However, unlike standard crash video games where players watch a rocket or a line ascend in real-time and need to cash out before it crashes, Limbo strips away the visual interruptions.

In Limbo, the player sets a **target multiplier** (e.g., 2x, 10x, and even 1000x) and puts a bet. The game's algorithm then generates a random multiplier result. If the produced multiplier amounts to or greater than the gamer's target, the bet wins. If it falls short, the bet is lost.

The name "Limbo" uses the traditional limbo dance idea: *How low can you go?* Or in this context, *How high can you intend?*

Secret Characteristics of Limbo:

3. **Examine the Win Chance:** As the target multiplier is adjusted, the interface immediately calculates the statistical probability (win opportunity) of hitting that target.
4. **Press Bet:** The gamer starts the round. The system generates a random number.
5. **View the Result:** The produced number is displayed quickly. If it satisfies or beats the target, the payout is credited to the gamer's account immediately.
