- **Scissors** cuts Paper.
- **Paper** covers Rock.

When played casually, a match is typically a fast best-of-three affair. In a gambling context, however, the structure becomes a lot more stiff. Gamers-- or gamblers wagering on external rivals-- face particular formats created to decrease ties and make the most of tactical depth.

2. **The Choice:** The gamer clicks their chosen symbol: Rock, Paper, or Scissors.
3. **The Reveal:** The computer's option is exposed at the same time.

4. The Payout:

Mathematically, if both players choose totally at random, Rock Paper Scissors is a game of pure opportunity with a 33.3% win, 33.3% loss, and 33.3% tie rate for each choice. Nevertheless, humans are essentially flawed random-number generators. This psychological element is precisely what expert gamers exploit in high-stakes competitions, such as those historically hosted by the USA Rock Paper Scissors League.

When human beings play under pressure, they show predictable behavioral patterns:

- **The Retaliation Rule:** If a player loses a round, they seldom toss the same sign once again instantly. Instead, they generally switch to the sign that *would have beaten* the opponent's previous winning throw.
- **Pattern Triggers:** If a player throws Rock two times in a row, they nearly never toss it a 3rd time, fearing predictability.

Comprehending these psychological nuances shifts the Rock Paper Scissors gambling game from a lottery into a game of mental warfare and read-and-react method.
