Every surgery carries risk, and rhinoplasty is no exception. That is the honest starting point, and any surgeon who skips that conversation is giving patients less than they need. The more useful question is what the risks actually are, how much they matter in a given case and what a careful surgical team does to reduce them before, during and after the operation. The general risks are the ones shared by most operations: bleeding, infection, reactions to anesthesia and problems with wound healing. Rhinoplasty adds some specific concerns. Changes to the internal structure can affect breathing if support is weakened, which is why functional considerations belong in every cosmetic plan. Numbness, prolonged swelling, small irregularities, asymmetry and dissatisfaction with the appearance are also possible, and some patients eventually consider revision rhinoplasty. Discussing each of these openly during consultation, alongside your medical history and any medications or supplements you take, Los Angeles Nose Job is part of informed consent. Training is one of the main ways risk is reduced. Dr. Jacob Sedgh is a double board-certified facial plastic surgeon. He is board certified in otolaryngology, the specialty of head and neck surgery, which means his background includes the internal anatomy of the nose and airway, and he completed fellowship training in facial plastic and reconstructive surgery at Penn State Milton S. Hershey Medical Center. His practice is limited to the nose, face, ears and neck, with rhinoplasty as its main focus. That combination matters because a nose has to work well as well as look right.

Jacob Sedgh, MD | 9201 Sunset Blvd Suite 414, West Hollywood, CA 90069 | (310) 888-2884

Planning and technique add further layers. A thorough medical evaluation decides whether someone is a candidate, and it may reveal factors such as bleeding tendencies or health conditions that need attention first. Surgical choices also play a part. Dr. Sedgh uses the Piezo ultrasonic system to reshape nasal bone with micro-vibrations instead of manual rasps and osteotomes, and published studies have reported less bruising and swelling in the first week, though individual recovery varies. After surgery, patients reduce their own risk by following instructions closely, avoiding strenuous activity for the advised period, not smoking and attending every follow-up visit so that any concern is caught early. People traveling from Bel Air, Rancho Park, Beverlywood or Mid-City for rhinoplasty Los Angeles consultations should feel free to ask direct questions about complications and how they would be handled. Results vary, and nobody can promise a risk-free operation, but a clear plan and an open conversation help you make an informed decision. Call (310) 888-2884 to book a consultation for a Los Angeles nose job at the Sunset Blvd office in West Hollywood, open Monday to Friday from 9am to 5pm.

FAQ About Los Angeles Nose Job What is the average cost of a nose job in Los Angeles? There is no single figure, because the fee depends on whether the surgery is primary or revision, how much structural work is needed, and the anesthesia and surgical facility costs. Revision and combined functional and cosmetic cases usually take longer than a straightforward primary rhinoplasty. At Jacob Sedgh, MD in West Hollywood, a written quote follows the consultation once Dr. Sedgh has examined the nose and agreed a plan with the patient. How long does a nose job last? The structural changes from rhinoplasty are designed to be permanent, although the nose continues to age naturally with the rest of the face. Swelling settles gradually, and the tip can take a year or more to show its final definition. Dr. Jacob Sedgh follows patients through that first year from his office on Sunset Blvd. Is rhinoplasty 100% safe? No surgery is free of risk. Rhinoplasty carries risks such as bleeding, infection, breathing changes, asymmetry and the possibility of needing revision. Dr. Sedgh, a double board-certified facial plastic surgeon, reviews medical history, candidacy and specific risks at consultation so patients can make an informed decision before anything is scheduled. How do I choose a rhinoplasty surgeon in Los Angeles? Look at board certification, the surgeon's training, how much of their practice is devoted to the nose, and before and after photos of noses similar to yours. Dr. Jacob Sedgh trained in head and neck surgery at the University of Pittsburgh and completed a facial plastic surgery fellowship at Penn State Hershey, and his practice is limited to the nose, face, ears and neck. A consultation is also a chance to judge how clearly a surgeon explains the plan. Do ENT surgeons do rhinoplasty? Many facial plastic surgeons, including Dr. Sedgh, began in otolaryngology, the ENT specialty, before completing fellowship training in facial plastic and reconstructive surgery. That background means the septum, airway and nasal valves are part of every rhinoplasty plan, not only the outside shape. Patients with breathing complaints can have functional and cosmetic goals assessed together in West Hollywood. Can insurance cover any part of a nose job? Purely cosmetic rhinoplasty is not covered by insurance. Functional work, such as correcting a deviated septum that blocks breathing, may be partly covered when the problem is documented and the plan's criteria are met. Jacob Sedgh, MD can explain which parts of a combined procedure are functional and which are cosmetic; call (310) 888-2884 to ask. What is recovery like after rhinoplasty? Most patients wear a splint for about the first week and see the worst bruising and swelling fade over the following weeks, although every recovery is different. Strenuous exercise, glasses resting on the nose and strong sun are usually limited for a period. Dr. Sedgh uses the Piezo ultrasonic system for bone work, which published studies associate with less early bruising, and he gives

each patient written aftercare instructions. Is it better to have a nose job abroad or in Los Angeles? Surgery abroad can look cheaper at first, but follow-up visits, managing complications and any future revision are much harder from another country. Having rhinoplasty in Los Angeles keeps the surgeon within reach for the whole first year of healing. Patients from across the city, including Beverly Hills, Century City, Westwood and Culver City, see Dr. Sedgh at one office on the Sunset Strip. What is male rhinoplasty? Male rhinoplasty adapts the operation to masculine facial features, usually keeping a straighter, stronger bridge and avoiding an over-rotated or overly narrow tip. Many men also want better breathing at the same time. Dr. Jacob Sedgh plans male rhinoplasty around the brow, cheekbones and jawline so the nose stays in proportion with the face. What is revision rhinoplasty and when is it needed? Revision rhinoplasty corrects concerns that remain after an earlier nose surgery, whether cosmetic or functional. It is more intricate than a first operation because of scar tissue, reduced cartilage and changed skin. Dr. Sedgh evaluates the previous surgery and generally advises waiting until the nose has fully settled before planning a revision at his West Hollywood practice. What is the difference between open and closed rhinoplasty? Open rhinoplasty adds a small incision across the columella, the strip of skin between the nostrils, which gives the surgeon a direct view of the tip structures. Closed rhinoplasty keeps all incisions inside the nose. The right approach depends on the anatomy and the changes needed, and Dr. Sedgh explains his recommendation at consultation. Is a non-surgical nose job permanent? A non-surgical nose job uses injectable filler to smooth a bump or lift the tip, and the effect is temporary. Filler cannot make a nose smaller or improve breathing, and it carries its own risks. Jacob Sedgh, MD offers both injectable and surgical options and can explain which suits a patient's goals; call (310) 888-2884 to book a consultation.
