What Is a Crash Casino Game?

At its core, a Crash video game is a real-time wagering game where a multiplier (often represented by arocket, a balloon, or a rising line) begins at 1 × and increases constantly. [CS2skin](#) Gamers put theirbets before the round starts and should choose when to "cash out" before the multiplier "crashes" (i.e., stops abruptly). If a gamer cashes out before the crash, they win their stake multiplied by thecurrent multiplier. If the crash occurs before they cash out, the bet is lost.

The appeal lies in the blend of luck and risk management: the longer you await a higher multiplier, the higher the potential reward, but the danger of losing the whole bet likewise rises.

How Crash Games Are Structured

1. **Betting Phase**-- Players put one or more bets within a set time window (generally a fewseconds).
2. **Multiplier Phase**-- After betting closes, the multiplier begins to increase from 1 × up.
3. **Cash-Out Decision**-- Players can by hand cash out at any time, locking in their jackpots.
4. **Crash Event**-- The multiplier stops randomly; the precise crash point is determined by a provably fair algorithm.
5. **Settlement**-- All uncashed bets are lost; winners get their payout instantly.

Since the crash point is created by a random number generator (RNG) that is openly verifiable(e.g., through a "provably fair" system), the video game is transparent and fair.
